Subject: San Jacinto RI/FS Oversight Task Order

Brian,

The Remedial Investigation/Feasibility Study Oversight Task Order for the San Jacinto River Waste Pits Superfund Site (Task Order Number 0130-RSBD-06ZQ, Contract EP-W-06-004), under Task # 3.5.1 (Collect/Prepare/Ship Environmental Samples), covers sampling for ground water, surface water, and sediment. However, tissue/biota sampling is not included. The EPA has directed the Potentially Responsible Parties for the site to collect fish tissue samples during the month of April, and EPA wishes to

9768809

collect one split sample for the fish tissue. The surface water samples outlined in the work plan are no longer required, and there is a new requirement for the collection of a tissue sample split. Does EA think that this could be accomplished with a field change order?

Please let me know if you have any questions on this.

Regards,

Gary Miller
